

Dredge *STUYVESANT* - Tampa Bay, FL
USACE, Jacksonville District

Are there incidents involving endangered or protected species? Yes X No

LOAD # 181 Times: Start 0650 End 0940 Dump 1050

Location(lat/long) Stations 337+00 to 468+00 Tide 1.7

Weather Skies cloudy, wind SE 15 knots, Seas 2-4' H₂O Surf.Temp 73°F

Below Mid-Depth NA

Port Draghead NA- Dragarm under repair Deflector: NA

Stbd Draghead Clay, rock and rope Deflector: OK

Inflow Screening Rock and shell. *Lepidochelys kempi* (Kemp's ridley)
Shattered but connected sample included 45% of carapace (mostly right side),
right fore flipper, head, neck, small portion of plastron, muscle and integument.

Overflow Screening Sea pork and trash

Comments: In routine post dumping examination of the hopper catwalk and inflow screening remains, a portion of a fresh dead Kemp's ridley was found against the forward screen mesh of the mid inflow. The turtle was a small adult of undetermined sex. The specimen was examined by both observers, photographically documented and weighted and disposed of at the dump site at the completion of load #182. No bow thrusters were utilized during load #181. For additional information reference accompanying Incident Report.
